

NORTHWEST PRECAST

Precast Concrete SoundWalls

Precast Concrete Sound Walls offer an aesthetically pleasing method of reflecting invasive noise while offering privacy and safety. With a nearly endless variety of design features including colors and custom insignias. Precast concrete sound walls are an easy to install, cost effective, long lasting and efficient noise abatement solution.

Northwest Precast can design and engineer a Precast Sound Wall to meet the requirements or specifications of a city's architecture or a community's identity.

Precast Sound Walls can also be designed with precast columns or galvanized steel columns, both providing strength and durability.

Precast columns

Galvanized steel columns

**NORTHWEST PRECAST IS
A MANUFACTURER OF**

Northwest Precast is a licensed manufacturer of Whisper Wall. Whisper Wall incorporates recycled automotive tires into a proprietary cementous mixture making it a true sound absorbing noise barrier. With over 12 million square feet installed, this proven product is an ideal candidate where sound absorption is required from highway and transportation use to many industrial applications. As in Precast Concrete Sound Walls, the same principles for design options are incorporated into this long lasting wall system.
